EVRAM EHAB

Software Engineering Manager | .NET, Azure & AI-enabled engineering workflows

Cairo, Egypt | +20 122 8666 814 | e@evram.me | linkedin.com/in/evram-ehab

PROFESSIONAL SUMMARY

Engineering Manager with 10+ years on the Microsoft stack (.NET / C#, currently shipping on .NET 10) and 4+ years leading architecture, delivery, hiring and mentorship. Built a 15-person team from zero to ship a healthcare marketplace competing with a $3B incumbent. Lead adoption of LLM-powered engineering workflows using shared agent skills, repository instructions and integrations with Azure DevOps, Seq and SonarQube. Experienced in hybrid cloud healthcare integrations, event-driven architecture, reliable bidirectional synchronization, and secure integration lifecycle design.

CORE SKILLS

Languages & frameworks: C#, .NET (through .NET 10), .NET Framework, ASP.NET Core, Entity Framework Core, REST APIs, microservices, Angular (working knowledge)

AI & engineering automation: LLM-assisted development, agentic workflows, Claude Code, Codex, shared skills/plugins, repository instructions, tool integrations, human review

Cloud & DevOps: Microsoft Azure, Azure DevOps (pipelines, repos), CI/CD, Git, Linux, Netlify, Datadog monitoring

Data & messaging: SQL Server, T-SQL, Azure Data Studio, Azure Service Bus, RabbitMQ

Architecture & technical leadership: Hybrid cloud/on-premises integration, event-driven systems, idempotent message processing, synchronization reliability, multi-client authentication, security hardening

Engineering quality: Code review, characterization testing, simulator-based integration testing, OpenTelemetry observability

Leadership & delivery: Team leadership (up to 15 engineers), hiring, sprint planning, mentorship, Agile / Scrum / Extreme Programming; healthcare and HIPAA, government delivery

PROFESSIONAL EXPERIENCE

Software Engineering Manager - Vosita (vosita.com), Cairo | Jan 2022 - Present

US digital health platform connecting patients with doctors and managing clinic operations.

- Built and scaled a 15-person engineering team from scratch, owning architecture, hiring and delivery end-to-end to ship a healthcare marketplace competing with a $3B incumbent.
- Collaborated on major architecture decisions for modernizing Medisoft and Lytec healthcare integrations into local Windows connectors and cloud synchronization workers connected through Azure Service Bus, with centralized administration and monitoring.
- Helped define reliability and data-integrity safeguards for bidirectional appointment and availability synchronization, including durable staging, idempotent processing, database identity validation, and restored-backup detection.
- Contributed to technical decisions on connector security and lifecycle management, including signed cloud commands, installation-scoped credentials, credential revocation, and provider data isolation.
- Helped shape modernization and verification approaches across healthcare bridges, including simulator-based integration testing, characterization tests before legacy-service decomposition, and shared OpenTelemetry instrumentation.
- Led adoption of AI-assisted engineering workflows through shared repository instructions and a Git-backed skills and plugins catalog for Claude Code and Codex.
- Standardized workflows for defect investigation, requirements review, PR review, and test coverage, integrating Azure DevOps, Seq, and SonarQube with evidence-based findings and human review.
- Launched the rebuilt Vosita platform on .NET 5 / ASP.NET Core and kept it current through every major release to .NET 10 by leading backend architecture and engineering standards.
- Cut third-party integration rollout from weeks to minutes, from manual installation to seamless syncing, by building Azure DevOps CI/CD pipelines, then hiring a dedicated DevOps team to own them.

- Unified sign-in across three core clients (web, mobile app, Hangfire admin console) and per-integration clients with a multi-client authentication server.
- Grew organic search visibility from zero on a newly launched platform to direct competition with the market leader by driving a Netlify-based SEO and performance overhaul.
- Sustained 100% HIPAA compliance across four products, validated through full in-house penetration testing, by partnering with business, finance and DevOps on controls and security hardening.
- Raised engineering quality and bench strength through mandatory code reviews, sprint retrospectives and structured mentorship for junior and mid-level engineers.

Lead Software Engineer (part-time) - Vosita, Cairo | Jun 2020 - Dec 2021

- Enabled the core business model by designing a tiered, API-based integration layer connecting three third-party clinic management systems and processing several thousand requests daily.
- Secured executive approval for a full rebuild by demonstrating limits of the legacy SQL database and .NET Framework codebase, then architected the .NET 5 replacement from scratch.

Senior Software Engineer - Thiqah Business Services (thiqah.sa), Cairo | Aug 2020 - Dec 2021

Saudi government software delivery; concurrent full-time role alongside part-time Vosita engagement.

- Delivered a Ministry of Culture platform in 90 days against a six-month estimate by applying Extreme Programming in a flat-structured team.
- Shipped four Saudi Vision 2030 government projects with zero critical post-launch defects using Microsoft technologies, Azure DevOps and ABP.io.

Senior Software Engineer - MCV, Manufacturing Commercial Vehicles, Cairo | Mar 2020 - Jun 2020

- Modernized a six-developer team’s toolchain in one quarter: migrated TFS repositories to Git, standardized branching, and introduced cloud services and structured delivery processes.

Senior Software Engineer - Evolvice GmbH (evolvice.de), Cairo | Aug 2018 - Jan 2020

- Delivered five projects on time, two built from scratch, for Adidas, Volkswagen, Leoni and Morgenstern in distributed teams spanning three time zones.
- Led a project from inception to on-time launch with a fully functional Agile team, earning strong client satisfaction.
- Eliminated exposure to critical CVEs by driving migration from end-of-life .NET Core 2.0 to 3.1 LTS and resolving breaking changes.

Senior Software Engineer - Maisonette Real Estate Software, Cairo | Sep 2017 - Aug 2018

- Reduced build and release times by 90%+ (25+ minutes per build) with automated TFS build and release infrastructure for a .NET WebForms product.
- Improved recurring-job performance by 70%+ and lowered compute costs with a new scheduling algorithm.

Software Engineer - Vezeeta (vezeeta.com), Cairo | Apr 2016 - Aug 2017

- Scaled a centralized REST API handling tens of thousands of daily scheduling, booking and notification requests through RabbitMQ and Windows-service consumers, reducing compute costs.

Earlier Roles - ComRec Solutions & HITS, Cairo | Dec 2014 - Mar 2016

- Junior Software Engineer: .NET hospital-management desktop systems at ComRec; T-SQL and Crystal Reports for HR and payroll systems at HITS.

EDUCATION

BSc in Computer Science, Computer Systems Major - Ain Shams University, Cairo | 2014

Graduation project: GPS Car Tracker - graded Excellent.
